## Focus on taking care of the patients; we take care of the routines.

We help our customers to remove ophthalmic patient queues. By taking away routine screening tasks and therefore letting customers personnel to concentrate on patients needing specialised care, Digifundus can help it's customers to multiply ophthalmic clinic patient throughput. In practice this means that we produce integrated service packages where customers can either cherry-pick the services they need or - alternatively - let us handle the entire service chain.

Two main application areas of our services are diabetic retinopathy and glaucoma. Our excellence in process and patient logistics knowledge, professional staff and years of experience can be applied to screening and monitoring of any eye disease. Usually we more than triple the patient throughput compared to processes in use. With us many of our customers have managed to remove their patient queues.

### Customer benefits:

- **Fast patient access, no capacity problems, easy deployment**
- **Customer can focus on patient care instead of office work**
- **Reliable and cost efficient way to organize screening**
- **Widely recommended partner**

One of our key expertise areas is patient recall management, which is a demanding task and takes lot of time. That time could be used to medical practice, not office work. Our intelligent recall management service ensures that the patients are examined at the right time

according to the severity of the pathology. This way changes can be detected in early stage and patient can be referred to lighter treatment before the situation gets worse needing more demanding actions. Overall this saves the costs in special health care.

Digifundus is the leading provider of ophthalmic screening and monitoring services in Finland, certified pursuant to ISO 9001:2015 and ISO 14001:2015. Our customer base covers a population of about 2,5 million. We have been operating since 2000, and provide services in more than 150 municipalities within 13 health care districts across Finland and Sweden. The operations of Digifundus are focused on diagnosing, screening and monitoring of eye diseases such as diabetic retinopathy, glaucoma and age-related macular degeneration.

If you got interested in our service,  
do not hesitate to contact us!
